DETAILED ACTION

Specification

1. This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required.

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Claim Objections

3. Claims 4-19 objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

4. Claim 1 is objected to because of the following informalities: the phrase, "to the body to same in articulated manner" is unclear. The examiner suggests removing the words "to same" for clarity.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 1-3 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim 1 recites the broad recitation "Small vehicle", and the claim also recites "e.g. caddy cart" which is the narrower statement of the range/limitation.

6. Claim 1 recites the limitation "the hinged area" in line 7. There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 1-3, as best understood, are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 6,715,774 issued to Cassoni.

Cassoni teaches in Figures 1-18 of a small vehicle, with a body (2) and at least two wheels (31) each connected to the body via a stub axle (7) attached to the body to same in articulated manner, wherein the stub axles (7) are pivotable in at least a first position (Figure 2) in which they are folded up against the body (2) and a second position (Figure 3) in which the stub axles (7) extend out from the body and which is defined as the traveling position (Figure 3) of the small vehicle, characterized in that at least one spring (11) is provided which engages on one side at the body (2) and on the other at the stub axles (7) via a hinged area (connected to element 17 on the body and element 77 on the stub axle; the stub legs pivot about hinge shown by label in Figure 2-6) and by its spring force alone holds the traveling position of the stub axles without additional radial reinforcements and stays; Figures 9 and 10 show that the only the springs support the stub axles at an end opposite the hinge assembly (A). In re claim 3, the spring is shown in Figure 2 to rest against the hinge part (A).

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent No. 6,050,592 issued to Kim, U.S. Patent No. 6,007,031 issued to Tang, U.S. Patent No. 5,829,585 issued to Kao et al., U.S. Patent No. 2,825,574 issued to Williamson, and U.S. Patent No. 7,287,765 issued to Murphy et al. all teach of vehicles with retractable wheels that engage a body portion.
